

PAYAL MANIK

Aspiring Software Developer

Bhubaneswar, Odisha | +91 8018637943 | manik37payal@gmail.com | github.com/payal-manik | [Portfolio](#)

SUMMARY

Computer Applications graduate (BCA), currently pursuing MCA, with a working foundation in data structures, object-oriented design, and cloud fundamentals (AWS, GCP) applied across three end-to-end projects — a full-stack booking platform, a Power BI-driven analysis of 38,576 loan records, and a machine learning pricing model. Comfortable moving from an ambiguous problem to shipped, working software: coding, testing, debugging, and validating results against real data. Curious about AI-native application engineering — prompt engineering and AI output evaluation — and eager to build that depth through hands-on, mentored work.

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, SQL
- **AI & Cloud Fundamentals:** AI/LLM Concepts, Prompt Engineering (foundational), AWS & GCP Basics, Oracle AI Foundations Associate
- **Core CS Foundations:** Data Structures & Algorithms, Object-Oriented Design, Database Management Systems (DBMS), Software Development Lifecycle (SDLC), APIs & Microservices (concepts)
- **Web & Frontend:** HTML/CSS, Bootstrap, JavaScript
- **Data & Machine Learning:** Exploratory Data Analysis, Feature Engineering, Power BI, Pandas, Advanced Excel
- **Tools:** Git, GitHub, VS Code, Linux (basic)

PROJECTS

YatraSaathi — Full-Stack Travel Booking Platform | *HTML, CSS, JavaScript, Node.js, MongoDB, Git*

- Collaborated on a team-built full-stack travel platform supporting destination search, itinerary booking, and user login, with a Node.js/Express backend and MongoDB data layer.
- Contributed to frontend development and prepared the project's documentation for final submission.

Banking & Loan Data Analysis — Capstone Project | *Python, SQL, Excel, Power BI*

- Cleaned and processed a structured dataset of **38,576 loan records** across 24 fields using SQL and Python, resolving missing values and validating data integrity with zero duplicate records.
- Built **3 interactive Power BI dashboards** (Summary, Overview, Details) tracking loan trends, repayment performance, and portfolio KPIs including a **\$435.7M** total funded amount and **\$473M** total amount received across all 50 states.
- Identified loan grade as the strongest predictor of default: Grade G loans defaulted at **31.3%** vs. **5.7%** for Grade A — a 5.5x spread — and found small-business loans defaulted at **25.6%**, nearly double the portfolio-wide average of **13.8%**.

Java Quiz Application | *Java, OOP, Swing, Git*

- Developed a desktop quiz application in Java using OOP principles, with a Swing-based UI supporting question categories and real-time score calculation.
- Implemented user input validation and session handling; debugged and tested the application in a Linux environment.

INTERNSHIP

Machine Learning Using Python — NIELIT

- Built a car sales price prediction model in Python, applying feature engineering and exploratory data analysis to a dataset of vehicle records.
- Applied iterative feature selection and preprocessing to improve model prediction reliability across multiple vehicle attributes.

CERTIFICATIONS

- AI Foundations Associate — Oracle
- Google Cloud Platform (GCP) Masterclass — Udemy
- AWS Cloud Essentials — Udemy

EDUCATION

Master of Computer Applications (MCA) | Utkal University | 2025 – Present

Bachelor of Computer Applications (BCA) | Utkal University | 2022 – 2025

Higher Secondary Education | SSC(A) College, Puri | 2020 – 2022

Secondary Education | SSVM Jogeswarpur, Puri | 2020

Languages: English, Hindi, Odia
